

Settlement (Understanding Cities)

List of cities in the United Kingdom

meant that extra-urban settlements such as the towns of Olney and West Mersea fall within de jure cities. The map shows the 76 cities in the United Kingdom

This is a list of cities in the United Kingdom that are officially designated as such as of 29 August 2022. It lists those places that have been granted city status by letters patent or royal charter.

There are currently 76 such cities in the United Kingdom: 55 in England, eight in Scotland, seven in Wales, and six in Northern Ireland. Of these, 24 in England, two in Wales, and two in Northern Ireland have Lord Mayors; four in Scotland have Lord Provosts. In some cases, the area holding city status does not coincide with the built up area or conurbation of which it forms part. In Greater London, for example, the Cities of London and Westminster hold city status separately, but no other local authority in the London Region has been granted city status, nor has the Greater London Authority.

In other cases, such as the cities of Canterbury and Lancaster, the status applies to a local government district which extends over a number of towns and rural areas outside the main settlement proper. In England, city status sometimes applies to civil parishes, such as with Ripon; though the status may not apply to the local government district which share their name. For example, the civil parishes of Lichfield and Chichester each hold city status, but Lichfield District and Chichester District in which they are situated do not.

As of 2022, there are currently five ceremonial counties which contain three cities – Cambridgeshire (Ely, Cambridge and Peterborough), Essex, Hampshire, West Midlands and West Yorkshire. Outside the UK within British overseas cities of the British Overseas Territories and Crown Dependencies, there are currently five. The number increased as part of the Platinum Jubilee celebrations by the addition of Stanley in the Falkland Islands and Douglas in the Isle of Man.

On 1 March 2022, then-prince Charles made Southend-on-Sea England's 52nd city in memory of Sir David Amess.

Memorandum of understanding

A memorandum of understanding (MoU) is a type of agreement between two (bilateral) or more (multilateral) parties. It expresses a convergence of will

A memorandum of understanding (MoU) is a type of agreement between two (bilateral) or more (multilateral) parties. It expresses a convergence of will between the parties, indicating an intended common line of action. It is often used either in cases where parties do not imply a legal commitment or in situations where the parties cannot create a legally enforceable agreement. It is a more formal alternative to a gentlemen's agreement.

Whether a document constitutes a binding contract depends only on the presence or absence of well-defined legal elements in the text proper of the document (the so-called "four corners"). The required elements are offer and acceptance, consideration, and the intention to be legally bound (*animus contrahendi*). In the US, the specifics can differ slightly depending on whether the contract is for goods (falls under the Uniform Commercial Code) or services (falls under the common law of the state).

Many companies and government agencies use MoUs to define a relationship between departments, agencies or closely held companies.

Linear settlement

linear settlement is a (normally small to medium-sized) settlement or group of buildings that is formed in a long line. Many of these settlements are formed

A linear settlement is a (normally small to medium-sized) settlement or group of buildings that is formed in a long line. Many of these settlements are formed along a transport route, such as a road, river, or canal. Others form due to physical restrictions, such as coastlines, mountains, hills or valleys. Linear settlements may have no obvious centre.

In the case of settlements built along a route, the route predated the settlement, and then the settlement grew along the transport route. Often, it is only a single street with houses on either side of the road. Mileham, Norfolk, England is an example of this pattern. Later development may add side turnings and districts away from the original main street. Places such as Southport, England developed in this way.

A linear settlement is in contrast with ribbon development, which is the outward spread of an existing town along a main street, and with a nucleated settlement, which is a group of buildings clustered around a central point.

Particular types of linear settlements are linear village, chain village, street village (Polish: ulicówka; German: Straßendorf, Lithuanian: gatvinis kaimas, French: village-rue), and some others. Different countries have varying classifications of linear settlements.

Sułoszowa, Poland, is notable for its 9 km long, single main street and its thin strips of farmland, inhabited by 3500 people.

New York City

science cities / Nature Index 2022 Science Cities“; *nature.com*. Retrieved April 24, 2024. “NYC Mayor’s Office for International Affairs”;. *The City of New*

New York, often called New York City (NYC), is the most populous city in the United States. It is located at the southern tip of New York State on one of the world's largest natural harbors. The city comprises five boroughs, each coextensive with its respective county. The city is the geographical and demographic center of both the Northeast megalopolis and the New York metropolitan area, the largest metropolitan area in the United States by both population and urban area. New York is a global center of finance and commerce, culture, technology, entertainment and media, academics and scientific output, the arts and fashion, and, as home to the headquarters of the United Nations, international diplomacy.

With an estimated population in July 2024 of 8,478,072, distributed over 300.46 square miles (778.2 km²), the city is the most densely populated major city in the United States. New York City has more than double the population of Los Angeles, the nation's second-most populous city. Over 20.1 million people live in New York City's metropolitan statistical area and 23.5 million in its combined statistical area as of 2020, both largest in the US. New York City is one of the world's most populous megacities. The city and its metropolitan area are the premier gateway for legal immigration to the United States. An estimated 800 languages are spoken in New York City, making it the most linguistically diverse city in the world. The New York City metropolitan region is home to the largest foreign-born population of any metropolitan region in the world, approximately 5.9 million as of 2023.

New York City traces its origins to Fort Amsterdam and a trading post founded on Manhattan Island by Dutch colonists around 1624. The settlement was named New Amsterdam in 1626 and was chartered as a city in 1653. The city came under English control in 1664 and was temporarily renamed New York after King Charles II granted the lands to his brother, the Duke of York, before being permanently renamed New York in 1674. Following independence from Great Britain, the city was the national capital of the United

States from 1785 until 1790. The modern city was formed by the 1898 consolidation of its five boroughs: Manhattan, Brooklyn, Queens, the Bronx, and Staten Island.

Anchored by Wall Street in the Financial District, Manhattan, New York City has been called both the world's premier financial and fintech center and the most economically powerful city in the world. As of 2022, the New York metropolitan area is the largest metropolitan economy in the world, with a gross metropolitan product of over US\$2.16 trillion. The New York metropolitan area's economy is larger than all but nine countries. Despite having a 24/7 rapid transit system, New York also leads the world in urban automobile traffic congestion. The city is home to the world's two largest stock exchanges by market capitalization of their listed companies: the New York Stock Exchange and Nasdaq. New York City is an established haven for global investors. As of 2025, New York City is the most expensive city in the world for expatriates and has by a wide margin the highest residential rents of any city in the nation. Fifth Avenue is the most expensive shopping street in the world. New York City is home to the highest number of billionaires, individuals of ultra-high net worth (greater than US\$30 million), and millionaires of any city in the world by a significant margin.

Proto-city

first Sumerian cities, many proto-cities show little correlation with later urban settlements. The development of cities and proto-cities and the transition

A proto-city is a large, dense Neolithic settlement that is largely distinguished from a city by its lack of planning and centralized rule. The term mega-sites is also used. While the precise classification of many sites considered proto-cities is ambiguous and subject to considerable debate, common examples include sites of the Pre-Pottery Neolithic B culture and following cultures in the Fertile Crescent such as Jericho and Çatalhöyük, sites of the Cucuteni-Trypillia culture in Southeast Europe, and of the Ubaid period in Mesopotamia. These sites pre-date the Mesopotamian city-states of the Uruk period that mark the development of the first indisputable urban settlements, with the emergence of cities such as Uruk at the end of the Fourth Millennium, B.C.

The emergence of cities from proto-urban settlements is a non-linear development that demonstrates the varied experiences of early urbanization. Whilst the proto-urban sites of the Ubaid period in northern Mesopotamia anticipate the social and political developments of the first Sumerian cities, many proto-cities show little correlation with later urban settlements. The development of cities and proto-cities and the transition away from hunting and gathering toward agriculture is known as the Neolithic Revolution.

City

York City Cities portal Lists of cities List of adjectivals and demonyms for cities Compact city Eco-cities Lost city Megacity Metropolis Settlement hierarchy

A city is a human settlement of a substantial size. The term "city" has different meanings around the world and in some places the settlement can be very small. Even where the term is limited to larger settlements, there is no universally agreed definition of the lower boundary for their size. In a narrower sense, a city can be defined as a permanent and densely populated place with administratively defined boundaries whose members work primarily on non-agricultural tasks. Cities generally have extensive systems for housing, transportation, sanitation, utilities, land use, production of goods, and communication. Their density facilitates interaction between people, government organizations, and businesses, sometimes benefiting different parties in the process, such as improving the efficiency of goods and service distribution.

Historically, city dwellers have been a small proportion of humanity overall, but following two centuries of unprecedented and rapid urbanization, more than half of the world population now lives in cities, which has had profound consequences for global sustainability. Present-day cities usually form the core of larger metropolitan areas and urban areas—creating numerous commuters traveling toward city centres for

employment, entertainment, and education. However, in a world of intensifying globalization, all cities are to varying degrees also connected globally beyond these regions. This increased influence means that cities also have significant influences on global issues, such as sustainable development, climate change, and global health. Because of these major influences on global issues, the international community has prioritized investment in sustainable cities through Sustainable Development Goal 11. Due to the efficiency of transportation and the smaller land consumption, dense cities hold the potential to have a smaller ecological footprint per inhabitant than more sparsely populated areas. Therefore, compact cities are often referred to as a crucial element in fighting climate change. However, this concentration can also have some significant harmful effects, such as forming urban heat islands, concentrating pollution, and stressing water supplies and other resources.

Bank for International Settlements

The Bank for International Settlements (BIS) is an international financial institution which is owned by member central banks. Its primary goal is to

The Bank for International Settlements (BIS) is an international financial institution which is owned by member central banks. Its primary goal is to foster international monetary and financial cooperation while serving as a bank for central banks. With its establishment in 1930 it is the oldest international financial institution. Its initial purpose was to oversee the settlement of World War I war reparations.

The BIS carries out its work through its meetings, programmes and through the Basel Process, hosting international groups pursuing global financial stability and facilitating their interaction. It also provides banking services, but only to central banks and other international organizations.

The BIS is based in Basel, Switzerland, with representative offices in Hong Kong and Mexico City.

Moonbase

Director General until 2021, described in 2017 the Village simply as "an understanding, not a single facility".. This initiative is meant as the first step

A moonbase (or lunar base) is a human outpost on or below the surface of the Moon. More than a mere site of activity or temporary camp, moonbases are extraterrestrial bases, supporting robotic or human activity, by providing surface infrastructure. Missions to the Moon have realized single-mission bases, (Tranquility Base being the first), as well as some small permanent infrastructure like lunar laser ranging installations.

Plans for establishing moonbases, with surface or sub-surface research stations, have been proposed and are actively pursued nationally and increasingly internationally. As of 2025, the two most advanced projects to set up moonbases have been pursued multilaterally as part of the US-led Artemis program, with its planned Artemis Base Camp and as the China-led International Lunar Research Station. A broader, international infrastructure has been envisioned with the so-called Moon Village concept, and a general international regulatory regime for lunar activity has been called for by the 1979 signed Moon Treaty, and advocated for with an implementation agreement since 2020.

The surface infrastructure of a base may consist of pre-integrated basic landers, as supporting stations for robotic rovers, or habitation modules for crewed presence, or of surface

assembled or in-situ derived and constructed surface stations for sustained lunar habitation. Lunar bases may work with lunar space stations, which in contrast provide infrastructures in lunar orbit supporting activity from there, as with the planned Lunar Gateway of the Artemis program.

The development of moonbases into permanent extraterrestrial settlements has been put forward. Broader lunar colonization or space colonization in general, particularly as laying territorial claims, which is

prohibited by international space law, has been criticized for perpetuating colonialism.

Megacity

Star Wars universe. Cities portal World portal Economies of agglomeration Global city List of largest cities List of largest cities throughout history

A megacity is a very large city, typically with a population of more than 10 million people. The United Nations Department of Economic and Social Affairs (UN DESA) in its 2018 "World Urbanization Prospects" report defines megacities as urban agglomerations with over 10 million inhabitants. A University of Bonn report holds that they are "usually defined as metropolitan areas with a total population of 10 million or more people". Elsewhere in other sources, from five to eight million is considered the minimum threshold, along with a population density of at least 2,000 per square kilometre. The terms conurbation, metropolis, and metroplex are also applied to the latter.

The total number of megacities in the world varies between different sources and their publication dates. The world had 32 according to EU Global Human Settlement Layer (in 2024), 33 according to UN DESA (in 2018), 39 according to the OECD, 44 according to Demographia (in 2023), and 45 according to CityPopulation.de (in 2023). In total, 53 unique places are mentioned as megacities across these sources. A good percentage of these urban agglomerations are in China and India. The other four countries with more than one megacity are Brazil, Japan, Pakistan, and the United States. African megacities are present in Nigeria, Egypt, South Africa, Angola and the DRC; European megacities are present in Russia, France, the United Kingdom, and Turkey (also in Asia); megacities can be found in Latin America in the countries of Brazil, Mexico, Colombia, Peru, and Argentina.

Some sources identify the Greater Tokyo Area as the largest megacity in the world, while some others give the title to the Pearl River Delta in China.

Desakota

in the extended surroundings of large cities, in which urban and agricultural forms of land use and settlement coexist and are intensively intermingled

Desakota is a term used in urban geography to describe areas in the extended surroundings of large cities, in which urban and agricultural forms of land use and settlement coexist and are intensively intermingled.
