

Dog On A Frog

Dog Man

super-intelligent baby frog with the appearance of a tadpole; and the F.L.E.A.S., a trio of evil animals who were Petey's childhood friends. Dog Man (2016) Dog Man: Unleashed

Dog Man is an American children's graphic novel series by author and illustrator Dav Pilkey. A spinoff and story within a story of Pilkey's Captain Underpants series, Dog Man revolves around the adventures of the titular character, a half-man, half-dog hybrid who works as a police officer.

As of 2025, there are 13 books in the series. The latest book, Dog Man: Big Jim Begins, was released on December 3, 2024. A 14th book titled Dog Man: Big Jim Believes has been announced and is set to release on November 11, 2025.

The Dog Man series has been hugely popular, selling a total of over 3.8 million copies, 13% of all total comic book sales, as charted by BookScan, not including digital copies or any copy sold by Scholastic through school book fairs.

Starting in 2020, the series received its own spin-off focusing on Dog Man's sidekick Cat Kid (Li'l Petey's superhero form), entitled Cat Kid Comic Club. The series has been adapted into two stage musicals, a 2024 video game titled Dog Man: Mission Impawsible, and DreamWorks' 50th full-length animated feature film Dog Man. A sequel is in development.

The Frog, the Dog and the Devil

The Frog, the Dog and the Devil is a 1986 New Zealand short animated film. It was nominated for an Academy Award for Short Film (Animated) at the 59th

The Frog, the Dog and the Devil is a 1986 New Zealand short animated film. It was nominated for an Academy Award for Short Film (Animated) at the 59th Academy Awards.

Flip the Frog

Flip the Frog is an animated cartoon character created by American animator Ub Iwerks. He starred in a series of cartoons produced by Celebrity Pictures

Flip the Frog is an animated cartoon character created by American animator Ub Iwerks. He starred in a series of cartoons produced by Celebrity Pictures and distributed by Metro-Goldwyn-Mayer from 1930 to 1933. The series had many recurring characters, including Flip's dog, the mule Orace, and a dizzy neighborhood spinster.

Frog

A frog is any member of a diverse and largely semiaquatic group of short-bodied, tailless amphibian vertebrates composing the order Anura (coming from

A frog is any member of a diverse and largely semiaquatic group of short-bodied, tailless amphibian vertebrates composing the order Anura (coming from the Ancient Greek ??????, literally 'without tail'). Frog species with rough skin texture due to wart-like parotoid glands tend to be called toads, but the distinction between frogs and toads is informal and purely cosmetic, not from taxonomy or evolutionary history.

Frogs are widely distributed, ranging from the tropics to subarctic regions, but the greatest concentration of species diversity is in tropical rainforest and associated wetlands. They account for around 88% of extant amphibian species, and are one of the five most diverse vertebrate orders. The oldest fossil "proto-frog" *Triadobatrachus* is known from the Early Triassic of Madagascar (250 million years ago), but molecular clock dating suggests their divergence from other amphibians may extend further back to the Permian, 265 million years ago.

Adult frogs have a stout body, protruding eyes, anteriorly-attached tongue, limbs folded underneath, and no tail (the "tail" of tailed frogs is an extension of the male cloaca). Frogs have glandular skin, with secretions ranging from distasteful to toxic. Their skin varies in colour from well-camouflaged dappled brown, grey and green, to vivid patterns of bright red or yellow and black to show toxicity and ward off predators. Adult frogs live in both fresh water and on dry land; some species are adapted for living underground or in trees. As their skin is semi-permeable, making them susceptible to dehydration, they either live in moist niches or have special adaptations to deal with drier habitats. Frogs produce a wide range of vocalisations, particularly in their breeding season, and exhibit many different kinds of complex behaviors to attract mates, to fend off predators and to generally survive.

Being oviparous anamniotes, frogs typically spawn their eggs in bodies of water. The eggs then hatch into fully aquatic larvae called tadpoles, which have tails and internal gills. A few species lay eggs on land or bypass the tadpole stage altogether. Tadpoles have highly specialised rasping mouth parts suitable for herbivorous, omnivorous or planktivorous diets. The life cycle is completed when they metamorphose into semiaquatic adults capable of terrestrial locomotion and hybrid respiration using both lungs aided by buccal pumping and gas exchange across the skin, and the larval tail regresses into an internal urostyle. Adult frogs generally have a carnivorous diet consisting of small invertebrates, especially insects, but omnivorous species exist and a few feed on plant matter. Frogs generally seize and ingest food by protruding their adhesive tongue and then swallow the item whole, often using their eyeballs and extraocular muscles to help pushing down the throat, and their digestive system is extremely efficient at converting what they eat into body mass. Being low-level consumers, both tadpoles and adult frogs are an important food source for other predators and a vital part of the food web dynamics of many of the world's ecosystems.

Frogs (especially their muscular hindlimbs) are eaten by humans as food in many cuisines, and also have many cultural roles in literature, symbolism and religion. They are environmental bellwethers, with declines in frog populations considered early warning signs of environmental degradation. Global frog populations and diversities have declined significantly since the 1950s. More than one third of species are considered to be threatened with extinction, and over 120 are believed to have become extinct since the 1980s. Frog malformations are on the rise as an emerging fungal disease, chytridiomycosis, has spread around the world. Conservation biologists are working to solve these problems.

The Frog Prince

*"The Frog Prince; or, Iron Henry" (German: *Der Froschkönig oder der eiserne Heinrich*, literally "The Frog King or the Iron Henry") is a German fairy tale*

"The Frog Prince; or, Iron Henry" (German: *Der Froschkönig oder der eiserne Heinrich*, literally "The Frog King or the Iron Henry") is a German fairy tale collected by the Brothers Grimm and published in 1812 in *Grimm's Fairy Tales* (KHM 1). Traditionally, it is the first story in their folktale collection. The tale is classified as Aarne-Thompson type 440.

"The Frog Prince" can be compared to the similar European fairy tale "The Frog Princess".

Mercer Mayer

Little Monster Boy, Dog, Frog "FastPencil Premiere Signs Mercer Mayer". Publishers Weekly. Jan 25, 2011. "A BOY, A DOG AND A FROG". Kirkus Reviews. 1967

Mercer Mayer (born December 30, 1943) is an American children's author and illustrator. He has published over 300 books, using a wide range of illustrative styles. Mayer is best known for his Little Critter and Little Monster series of books.

Frog Baseball

Butt-Head spot a frog and exclaim "frog baseball!"; they then proceed to play baseball with the frog. After they kill the frog, they see a poodle and charge

Frog Baseball is an animated short film created by Mike Judge in 1992, which marks the first appearance of the Beavis and Butt-Head characters. It premiered in The Sick and Twisted Festival of Animation.

Jeff Chimenti

Moods – RatDog – 2000 Live Frogs Set 1 – Colonel Les Claypool's Fearless Flying Frog Brigade – 2001 Live at Roseland – RatDog – 2001 Live Frogs Set 2 – Colonel

Jeff Chimenti (born October 21, 1968) is an American keyboardist, best known for his ongoing work with former members of the Grateful Dead. Since May 1997 he has played with Bob Weir & RatDog, and has also played on every tour of The Dead (including the Fare Thee Well lineup) and Furthur. He currently plays with Dead & Company.

Frog legs

Frog legs (French: Cuisses de grenouille) are the muscular hindlimbs of frogs that are consumed as food by humans in some cuisines. Frog legs are rich

Frog legs (French: Cuisses de grenouille) are the muscular hindlimbs of frogs that are consumed as food by humans in some cuisines. Frog legs are rich in protein, omega-3 fatty acids, vitamin A, and potassium. They are often said to taste like chicken because of the mild flavor, with a texture most similar to chicken wings. The taste and texture of frog meat are approximately between chicken and fish. Frog muscles do not resolve rigor mortis as quickly as skeletal muscles from warm-blooded animals (chicken, for example) do, so heat from cooking can cause fresh frog legs to twitch.

In French cuisine, they are considered a national delicacy. Other parts of the world that eat frog legs include Singapore, Southern China, Cambodia, Vietnam, Thailand, Indonesia, Northeast India, Korea, Northern Italy, the Alentejo region of Portugal, Spain, Albania, Slovenia, Romania, Bulgaria, Northwestern Greece, Odesa Oblast of Ukraine, South Africa, and the Southern regions of the United States.

As of 2014, the world's largest exporter of edible frogs is Indonesia, followed by China. In Brazil, Mexico, and the Caribbean, many frogs are still caught wild. Edible frogs are raised commercially in certain countries, including Vietnam. Ethical concerns have been raised about the trade due to minimal transparency or regulation over supply chains, disruption of ecosystems, and inhumane treatment during slaughter.

Mahi-mahi

teasers or live chum, fishermen throw the fly to the feeding mahi-mahi. Once on a line, mahi-mahi are fast, flashy, and acrobatic, with beautiful blue, yellow

The mahi-mahi (MAH-hee-MAH-hee) or common dolphinfish (Coryphaena hippurus) is a surface-dwelling ray-finned fish found in off-shore temperate, tropical, and subtropical waters worldwide. It is also widely called dorado (not to be confused with Salminus brasiliensis, a freshwater fish) and dolphin (not to be confused with the aquatic mammal dolphin). It is one of two members of the family Coryphaenidae, the other being the pompano dolphinfish. These fish are most commonly found in the waters around the Gulf of

Mexico, Costa Rica, Hawaii, and the Indian Ocean. In Italy it is called corifena, lampuga or pesce capone, and has even given its name to the caponata though eggplant has now taken the place of the fish.
