Google Scholar

Google Scholar is a freely accessible web search engine that indexes the full text or metadata of scholarly literature across an array of publishing formats

Google Scholar is a freely accessible web search engine that indexes the full text or metadata of scholarly literature across an array of publishing formats and disciplines. Released in beta in November 2004, the Google Scholar index includes peer-reviewed online academic journals and books, conference papers, theses and dissertations, preprints, abstracts, technical reports, and other scholarly literature, including court opinions and patents.

Google Scholar uses a web crawler, or web robot, to identify files for inclusion in the search results. For content to be indexed in Google Scholar, it must meet certain specified criteria. An earlier statistical estimate published in PLOS One using a mark and recapture method estimated approximately 79–90% coverage of all articles published in English with an estimate of 100 million. This estimate also determined how many online documents were available. Google Scholar has been criticized for not vetting journals and for including predatory journals in its index.

The University of Michigan Library and other libraries whose collections Google scanned for Google Books and Google Scholar retained copies of the scans and have used them to create the HathiTrust Digital Library.

Google Assistant

and LG. These devices have support for Google Duo video calls, YouTube videos, GMaps directions, a GCalendar agenda, viewing of smart camera footage, in

Google Assistant is a virtual assistant software application developed by Google that is primarily available on home automation and mobile devices. Based on artificial intelligence, Google Assistant can engage in two-way conversations, unlike the company's previous virtual assistant, Google Now.

Google Assistant debuted in 2016 as part of Google's messaging app Allo, and its voice-activated speaker Google Nest. After a period of exclusivity on the Google Pixel smartphones, it was deployed on other Android devices starting in February 2017, including third-party smartphones and Android Wear (now Wear OS), and was released as a standalone app on the iOS operating system in May 2017. Alongside the announcement of a software development kit in April 2017, Assistant has been further extended to support a large variety of devices, including cars and third-party smart home appliances. The functionality of Assistant can also be enhanced by third-party developers. At CES 2018, the first Assistant-powered smart displays (Smart speakers with video screens) were announced, with the first one being released in July 2018. In 2020, Google Assistant is already available on more than 1 billion devices.

Users primarily interact with Google Assistant through natural voice, though keyboard input is also supported. Assistant is able to answer questions, schedule events and alarms, adjust hardware settings on the user's device, show information from the user's Google account, play games, and more. Google has also announced that Assistant will be able to identify objects and gather visual information through the device's camera, and support purchasing products as well as sending money. Google Assistant is available in more than 90 countries and over 30 languages, and is used by more than 500 million users monthly.

In October 2023, a mobile version of the Gemini chatbot, originally titled Assistant with Bard and simply just Bard, was unveiled during the Pixel 8 event. It is set to replace Assistant as the main assistant on Android

devices, although the original Assistant will remain optional. The chatbot was released on February 8, 2024, in the United States.

On March 14, 2025, it was announced that Assistant would stop working on Android devices using Android 10 and higher, iOS and other devices such as the Google Nest, being mostly replaced by Gemini. Assistant would remain for low-range phones or phones running Android 9 "Pie" and lower.

Dropbox Paper

formatting toolbar as you'd find in Evernote or a word processor like Google Docs or Microsoft Word. Instead, the text editor appears as a floating ribbon

Dropbox Paper, or simply Paper, is a collaborative document-editing service developed by Dropbox. Originating from the company's acquisition of document collaboration company Hackpad in April 2014, Dropbox Paper was officially announced in October 2015, and launched in January 2017. It offers a web application, as well as mobile apps for Android and iOS.

Dropbox Paper was described in the official announcement post as "a flexible workspace that brings people and ideas together. With Paper, teams can create, review, revise, manage, and organize — all in shared documents".

Reception of Dropbox Paper has been mixed. Critics praised collaboration functionality, including content available immediately, the ability to mention specific collaborators, assign tasks, write comments, as well as editing attribution, and revision history. It received particular praise for its support for rich media from a variety of sources, with one reviewer noting that the Paper's support for rich media exceeds the capabilities of most of its competitors. However, it was criticized for a lack of formatting options and editing features. While the user interface was liked for being minimal, reviewers cited the lack of a fixed formatting bar and missing features present in competitors' products as making Dropbox Paper seem like a "light" tool.

Wikimapia

maintaining the website forum, place categories, and the Wikimapia Documentation (Docs) are also given by the Wikimapia Team to some users. The data in Wikimapia

Wikimapia (stylized as wikimapia) is a geographic online encyclopedia project. The project implements an interactive clickable web map that utilizes Google Maps with a geographically-referenced wiki system, with the aim to mark and describe all geographical objects in the world.

International Day for Biological Diversity

21, 2011. "Compendium of TST (Technical Support Team) Issues Briefs", docs.google.com. Retrieved May 21, 2015. Victor Giurgiu (September 2011). "Simpozionul

The International Day for Biological Diversity (or World Biodiversity Day) is a United Nations–sanctioned international day for the promotion of biodiversity issues. It is currently held on May 22.

The International Day for Biological Diversity falls within the scope of the UN Post-2015 Development Agenda's Sustainable Development Goals. In this larger initiative of international cooperation, the topic of biodiversity concerns stakeholders in sustainable agriculture; desertification, land degradation and drought; water and sanitation; health and sustainable development; energy; science, technology and innovation, knowledge-sharing and capacity-building; urban resilience and adaptation; sustainable transport; climate change and disaster risk reduction; oceans and seas; forests; vulnerable groups including indigenous peoples; and food security. The critical role of biodiversity in sustainable development was recognized in a Rio+20 outcome document, "The World We Want: A Future for All".

From its creation by the Second Committee of the UN General Assembly in 1993 until 2000, it was held on December 29 to celebrate the day the Convention on Biological Diversity went into effect. On December 20, 2000, The date was shifted to commemorate the adoption of the Convention on May 22, 1992, at the Rio de Janeiro Earth Summit, and partly to avoid the many other holidays that occur in late December.

Indivisible movement

showing up at public events. The guide was first published online on Google Docs on December 14, 2016, with Levin posting a link to it on his personal

Indivisible is a progressive movement and organization in the United States initiated in 2016 as a reaction to the election of Donald Trump as President of the United States. The movement's organizational leadership includes the Indivisible Project, Indivisible Civics, and Indivisible Action. The movement began with the online publication of a handbook written by Congressional staffers with suggestions for peacefully but effectively resisting the move to the right in the executive branch of the United States government under the Trump administration that was widely anticipated and feared by progressives. According to American urban policy analyst Peter Dreier, the goal of Indivisible is to "save American democracy" and "resume the project of creating a humane America that is more like social democracy than corporate plutocracy."

Indivisible's founders, Leah Greenberg and Ezra Levin, were included in Time Magazine's 100 Most Influential People of 2019.

Android version history

system has been developed by Google on a yearly schedule since at least 2011. New major releases are usually announced at Google I/O in May, along with beta

The version history of the Android mobile operating system began with the public release of its first beta on November 5, 2007. The first commercial version, Android 1.0, was released on September 23, 2008. The operating system has been developed by Google on a yearly schedule since at least 2011. New major releases are usually announced at Google I/O in May, along with beta testing, with the stable version released to the public between August and October. The most recent exception has been Android 16 with its release in June 2025.

List of personal information managers

Date data automatically mapped to calendar.) Google Notebook Web Freeware deprecated by Google Docs, Google Keep Haystack all operating systems with POSIX

The following is a list of personal information managers (PIMs) and online organizers.

Google Developer Day

will present Google games and the latest innovations. Google product managers will be available to deliver technical advice and the agenda includes: Growth

Google Developer Day events were one-day web developer-focused gatherings around the world held annually by Google. They include seminars and codelabs focused on building of web, mobile, and enterprise applications with Google and open web technologies such as Android, HTML5, Chrome, App Engine, Google Web Toolkit and give participants an excellent chance to learn about Google developer products as well as meet the engineers who work on them.

Ruz
